PROFESSIONAL SUMMARY

B.Tech Artificial Intelligence & Data Science student with practical internship experience building and preprocessing machine learning workflows. Adept at leveraging the Python ecosystem, computer vision, and structured databases alongside modern frontend development practices to solve real-world technical problems. Driven to contribute to dynamic software, web, and AI engineering teams with a strong emphasis on clean code, structured APIs, and version control.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript
Frontend & Formats: HTML5, CSS3, Frontend Development, JSON
AI/ML Frameworks & Libs: Scikit-Learn, OpenCV, NumPy, Pandas
Databases & Tools: MySQL, JDBC, Git, GitHub

WORK EXPERIENCE

InternPe — AI/ML Developer Intern

June 2025 – July 2025

- Developed and evaluated machine learning predictive pipelines utilizing Python-based libraries, optimizing model feature configurations.
- Applied NumPy and Pandas to clean, preprocess, and structure raw data inputs, reducing noise for downstream model training.
- Leveraged OpenCV to build image processing functions and implement computer vision scripts for real-world analytical tasks.
- Utilized Git and GitHub for collaborative version control, managing feature branches and source documentation efficiently.

KEY PROJECTS

Gold Price Prediction Application (Python, Scikit-Learn, Pandas)

- Engineered a predictive Linear Regression model using Scikit-Learn on a historic USD/INR dataset to forecast currency and commodity price fluctuations.

Bank Management System (Java, MySQL, JDBC)

- Designed and implemented a full-stack desktop software application using Java, incorporating structural Object-Oriented Programming (OOP) concepts.
- Integrated a secure MySQL relational database backend using JDBC to safely manage transactional user records, balance updates, and account actions.

AI Tutor Chatbot (Python, JavaScript, JSON, NLP)

In Progress

- Building an automated conversational assistant utilizing Natural Language Processing (NLP) techniques to interpret educational queries and serve instant student support responses dynamically.
- Designing a lightweight JSON-based data structure to handle intent-matching configurations and manage structured chat history payloads.
- Developing a clean frontend chat interface using JavaScript to handle asynchronous API fetch requests to the backend bot.

EDUCATION

B.Tech in Artificial Intelligence & Data Science

Dr. MGR Educational and Research Institute, Chennai

Expected Graduation: 2027

STRENGTHS

Problem Solving • Technical Communication • Team Collaboration • Adaptability
